Arramagong is a self-contained live DVD, based on Xubuntu 9.04, that allows you to try a wide variety of open source geospatial software without installing anything. It provides effective tools for a range of geospatial use cases.

Application passwords are in the passwords.txt file on the desktop. Applications are individually licensed.

Most of the Live DVD applications can be installed on Apple OSX and Microsoft Windows as well. Arramagong comes with Macintosh Leopard/Snow Leopard and Windows XP/Vista installers for these applications in the WindowsInstallers and MacInstallers folders of the DVD.
